## **Blue Angelfish**

**Distinctive Features:** 1. Tail and pectoral fins bordered in blue. Body purplish to blue-green often with pronounced grey cast.

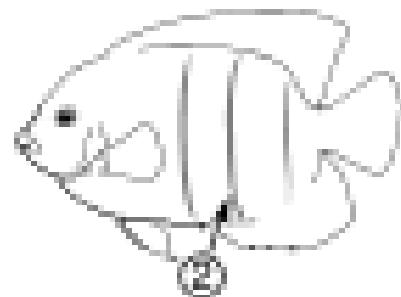

## **Queen Angelfish**

**Distinctive Features:** 1. Dark blue spot on forehead, specked and ringed with brilliant blue.  
2. Tail yellow. Blue to greenish blue body with yellow rims on scales.

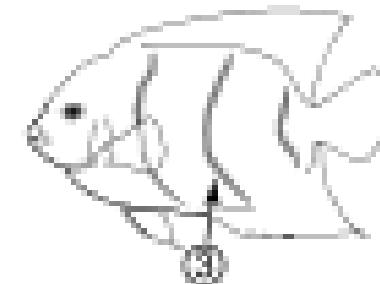

## **Blue Angelfish – Juvenile**

**Distinctive Features:** Dark blue body with three blue to white body bars. Middle blue body bar is straight. Yellow lips, yellow area from around pectoral to ventral fins; yellow tail.

## **Queen Angelfish – Juvenile**

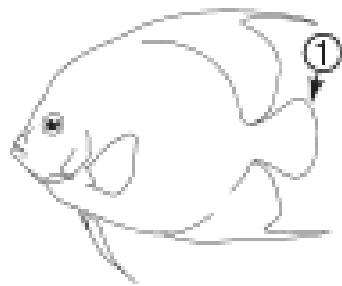

**Distinctive Feature:** Dark blue body with three brilliant blue to white body bars. Second body bar curved.

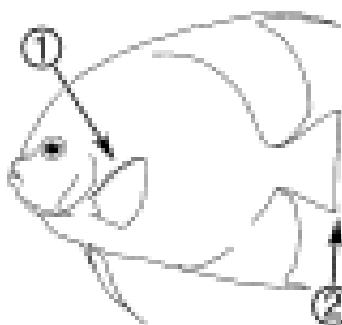

## **French Angelfish**

**Distinctive Features:** Bright Yellow ring around eye. Tail rounded. All fins black except pectoral which is yellow

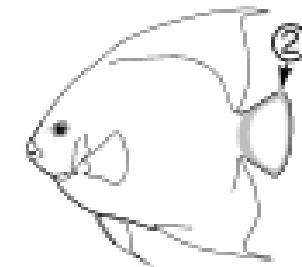

## **Grey Angelfish**

**Distinctive features:** Grey body. Yellow inner face of pectoral fin. Square-cut tail.

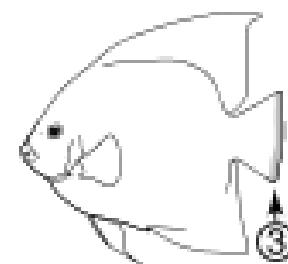

## **French Angelfish – Juvenile**

**Distinctive Features:** Rounded Tail with yellow border forming an oval. Black body with three yellow body bars. Yellow band extends down forehead stopping at the base of the upper lip, splits and goes around mouth.

## **Grey Angelfish - Juvenile**

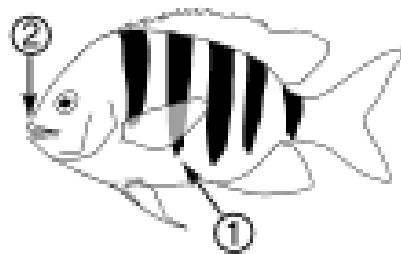

**Distinctive features:** Black body with three yellow body bars and one on the foretail. Yellow band extends down from forehead to, and around lips. Square cut tail with white to transparent margin.

## Sergeant Major

**Distinctive features:** Five black body bars.  
Upper lip does not overhand lower. Upper body  
usually yellow with shades of green and blue.  
Male becomes dark blue to purple during mating  
season.

## Hightail

**Distinctive features:** Black and white striped  
body. Elongated dorsal fin. Similar to Spotted  
Drum and Jackknife fish but lack bars on head.

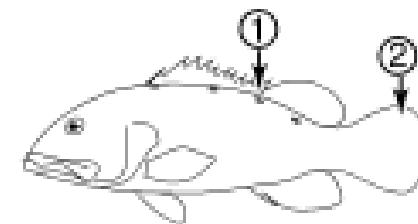

## Graysby - Juvenile

**Distinctive features:** Light reddish brown to gray  
body; may have a yellowish wash over head and  
back. Three to five pale or dark spots along base  
of dorsal fin. White band runs from nape,  
between eyes to lower lip.

## Graysby

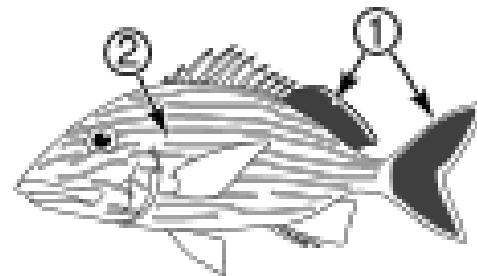

**Distinctive features:** Light reddish brown to gray  
body with darker orangish brown spots over  
body. Three to five pale or dark spots along  
base of dorsal fin. Tail more rounded than  
similar groupers/sea bass.

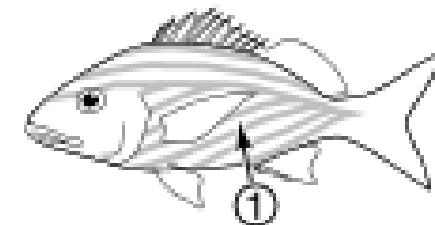

## **Bluestriped Grunt**

**Distinctive features.** Dark tail and rear dorsal fin with light margins; other fins yellow. Blue stripes over yellow-gold body.

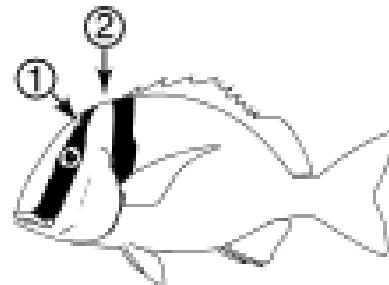

## **French Grunt**

**Distinctive Features:** Yellow stripes on a white to bluish or yellowish silver background. Yellow stripes below lateral line set on diagonal.

## **Porkfish Grunt**

**Distinctive Features:** Yellow-gold and silver body stripes. Two bold black diagonal bands on head. High back profile.

## **Smallmouth Grunt**

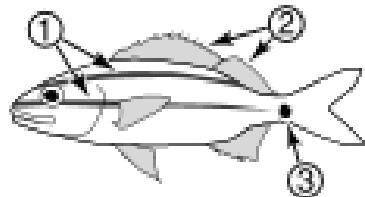

**Distinctive Features:** Elongated, cylindrical body. Five or six yellow strips over a silver to silvery-white body. Fins Yellow.

## **Tomtate**

**Distinctive Features:** Prominent yellow to bronze stripe running from snout through eye to base of tail. Another thinner strip on back. May have additional thin strips on body. Fins are pale.  
**Black spot on base of tail (not always present)**

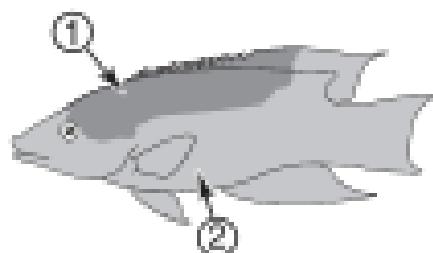

## **Rock Hind**

**Distinctive features.** Black saddle spot on base of tail. Reddish to dark dots cover the body and all fins. One to four pale or dark blotches along back below dorsal fin. Can pale to almost white or darken dramatically.

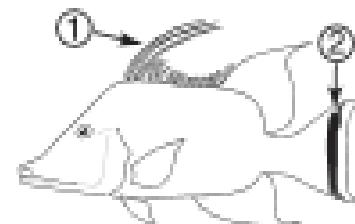

## **Spanish Hogfish**

**Distinctive Features:** Purple upper forebody, may become reddish. Yellow-gold belly and tail.

## **Hogfish**

**Distinctive Features:** First three spines of dorsal fins are long. Black blotch near end of dorsal fin. Large dusky to dark area covering snout and nape to foredorsal fin. Adults develop pronounced snout and have a large black bar across the central tail.

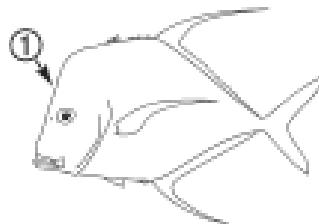

## Mahogany Snapper

**Distinctive Features:** Silver to white, often with reddish tinge. Reddish margin on tail (may quite narrow and pale). Reddish border on dorsal and anal fins. Often have a dark spot below rear dorsal fin.

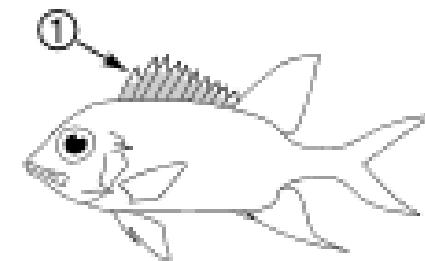

## Lookdown

**Distinctive Features:** Very thin body and extremely blunt head. May display three or four body bars. Fore part of dorsal and anal fins elongated.

## Longspine Squirrelfish

**Distinctive Features:** White triangular markings at tips of dorsal fin spines. Reddish body with light silvery stripes and occasional white patches on body. Elongated rear dorsal fin.

## Atlantic Spadefish

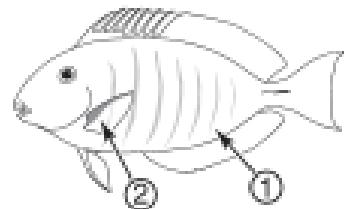

**Distinctive Features:** Silvery body with several dark bars. Body shape resembles a "spade" on playing cards.

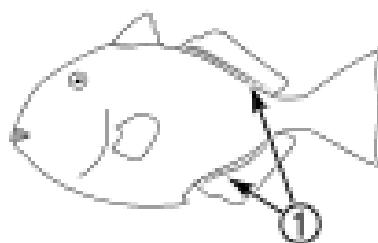

## **Doctorfish**

**Distinctive Features:** Body can change from bluish gray to dark brown, and pale or darken dramatically. Always have 10-12 body bars although they may be faint. Dark area extend from base of pectoral fin outward along leading edge.

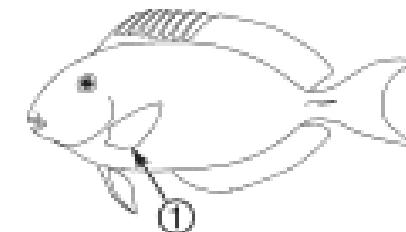

## **Black Durgon**

**Distinctive Features:** Black body. Pale blue lines along base of dorsal and anal fins.

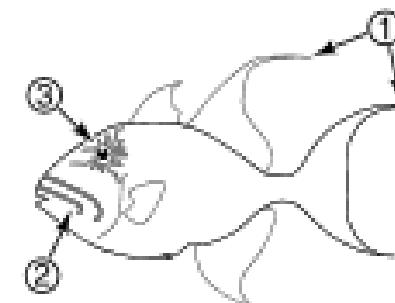

## **Ocean Surgeonfish**

**Distinctive Features:** Body of uniform color with no body bars. Pectoral fin clearish, often with yellow tints. Markings radiate from eye. Blue or white edging on dorsal, anal and tail fins.

## **Queen Triggerfish**

**Distinctive Features:** Body color in various shades of purple, blue, turquoise and green; lower half of head yellow or yellowish. Streaming tips on rear dorsal and tail fins. Two blue stripes on face. Small lines radiate from around eye.

## **Atlantic Tarpon**

**Distinctive Features:** Shiny, large “stainless steel” scales. Upturned mouth.

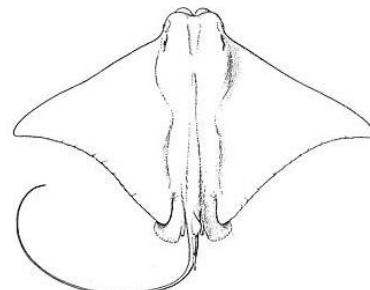

## **Green Moray Eel**

**Distinctive Features:** Heavy, uniform green to brown body with no markings.

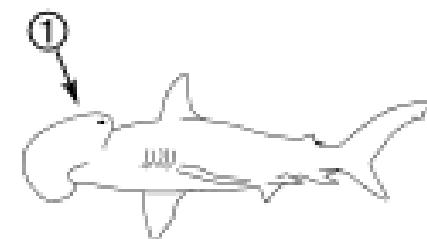

## **Cownose Ray**

**Distinctive Features:** The pectoral fins separate at the front of the head into two lobes with a center crease which, combined with the indented notch, give the rays a cow-like appearance.

## **Bonnethead Shark**

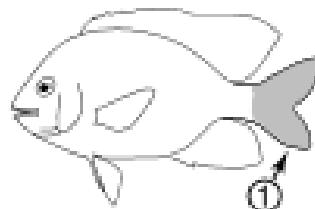

**Distinctive Features:** Grey with pale underside. Smooth, “spade-shaped” head.

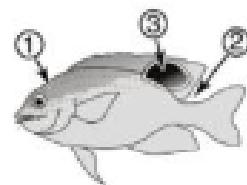

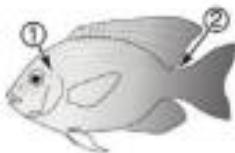

## **Yellowtail Damselfish**

**Distinctive Features:** Dark body; occasionally changing to yellow or yellow-orange. Yellow tail (starts as translucent to whitish, but changes to yellow on maturity). **JUVENILE:** Brilliant blue dots on dark blue body.

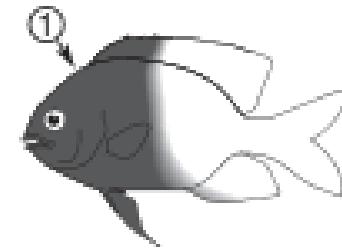

## **Beaugregory**

**Distinctive Features:** Dusky grey to bluish body with areas of yellow, especially on tail, rear dorsal and anal fins. Series of blue dots on head and gill cover continue as vague horizontal lines on upper body. Rarely have black spot on tail base. **JUVENILE:** Black spot ringed in blue on dorsal fin. Blue wash extending from upper head over dorsal fin and back.

## **Bicolor Damselfish**

**Distinctive Features:** Black and white. Forebody is usually black, however the boundary between dark and pale areas can vary greatly.

## **Cocoa Damselfish**

**Distinctive Features:** Usually have a dark spot on tail base (lack of spot causes confusion with Beaugregory). **JUVENILE:** Black spot ringed in blue on dorsal fin, extend slightly onto back. Blue wash extending from upper head over dorsal fin and back.

## Dusky Damselfish

**Distinctive Features:** Dorsal and anal fins rounded and rarely extend beyond base of tail. Narrow dark edge on anal fin. **JUVENILE:** Brilliant orange wash extends from snout across nape & about halfway down dorsal fin. Large dark spot on dorsal fin & small dark spot on tail base.

## Threespot Damselfish

**Distinctive Features:** Body varies from yellow to tan & grey, darkening with age. Yellow-gold crescent above eyes. Dark spot on base of pectoral fin. Lack saddle on upper base of tail. **JUVENILE** has large second spot on back and base of dorsal fin (disappears on maturity)

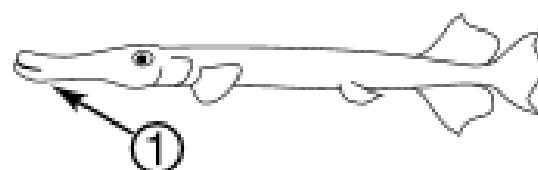

## Glassy/Copper Sweeper

**Distinctive Features:** Shiny copper color. Large eyes. Deep belly profile and very thin body.. Dark band at base of anal fin.

## Trumpetfish

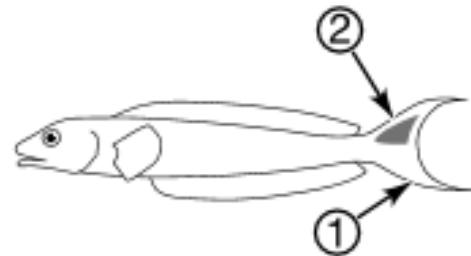

**Distinctive Features:** Long thin body. Trumpet-like mouth.

## Sand Tilefish

**Distinctive Features:** Long, white body.  
Crescent tail. Dark area on upper central tail.

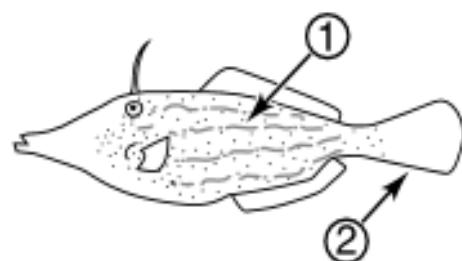

## Atlantic Creolefish

**Distinctive Features:** Bright red spot at base of pectoral fin. Three light or dark spots along back.

## Scrawled Filefish

**Distinctive Features:** Covered with blue to blue-green spots, irregular lines and black dots.  
Elongated body with long, broom-like tail.

## Orangespotted Filefish

**Distinctive Features:** In most common phase, they have wide, dark brown stripes and narrow, dull yellow strips that converge near tail base.  
White spot on upper base of tail, and usually a second smaller spot underneath. Orangish spots cover body.

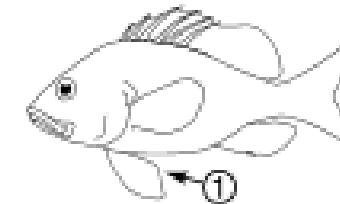

## **Butter Hamlet**

**Distinctive Features:** Grayish white to yellow. Blue markings on head and gill cover, often have a black dot on snout that is outlined in blue. Large black saddle on base of tail.

## **Black Hamlet**

**Distinctive Features:** Solid black color. Pelvic fins unusually long.

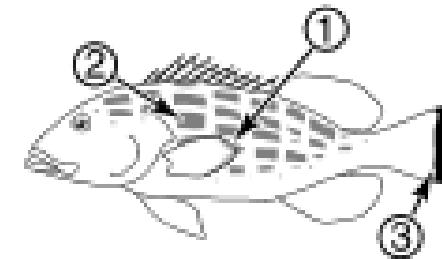

## **Neon Goby**

**Distinctive Features:** Electric blue body stripe runs from front of each eye to base of tail. No markings on snout.

## **Black Grouper**

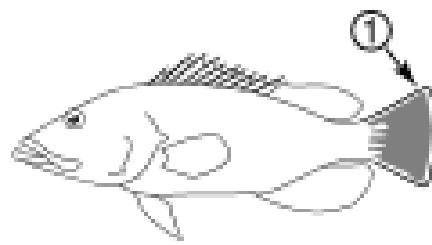

**Distinctive Features:** Normally reddish-brown to black. Can pale or darken until markings are indistinct. Thin pale to yellow margin on pectoral fins. Ends of rectangular blotches on upper body are nearly square. Tail has wide, black margin with thin, white edge.

## **Scamp (Grouper)**

**Distinctive Features:** Light tan to brown, but can darken quickly. Dark body spots ten to form broken stripes and rectangular splotches. Dusky tail has pale margin.

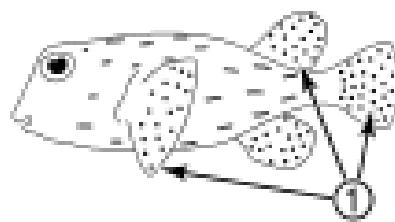

## **Coney (Grouper)**

**Distinctive Features:** Identification by color impractical because of several color phases; has a bi-color phase. Two black dots on lower lip (juvenile has four). Two black dots behind dorsal fin and on base of tail (juvenile has two white dots on base of tail).

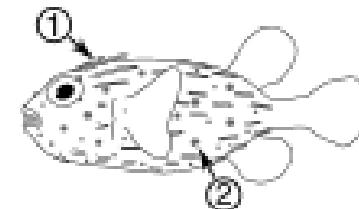

## **Porcupinefish**

**Distinctive Features:** Small dark spots over entire body and fins. Long spines are erect only when inflated.

## **Balloonfish**

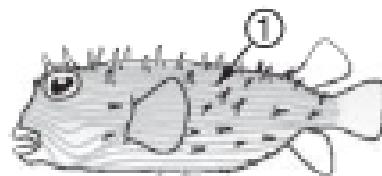

**Distinctive Features:** Long spines on head. Small dark spots on body, but NO spots on fins. Iris is yellow; pupil is iridescent blue-green specks. Spines usually lowered but become erect when inflated.

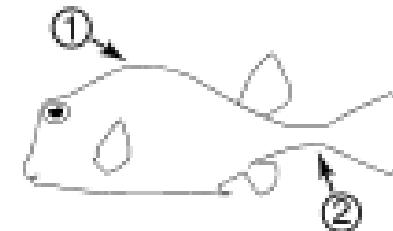

## **Striped Burrfish**

**Distinctive Features:** Irregular pattern of dark brown, more-or-less parallel stripes on back and sides. Iris is yellow-gold and pupil has iridescent blue-green specks. Spines **ALWAYS** erect.

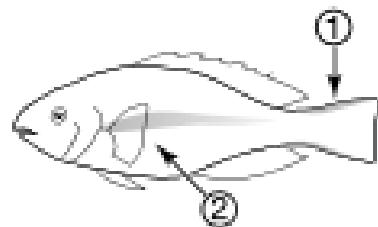

## **Buffalo Trunkfish**

**Distinctive Features:** Obvious hump on back. Base of tail long. Two sharp spines in front of anal fin.; no spines above eyes.

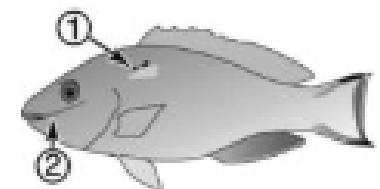

## **Princess Parrotfish**

**Distinctive Features:** Blue to green body. Border on tail yellow to orange or pink; juvenile tail have dark border. Yellow or orangish stripe down midbody fading to rear; juvenile has three black strips and white belly.

## **Redband Parrotfish**

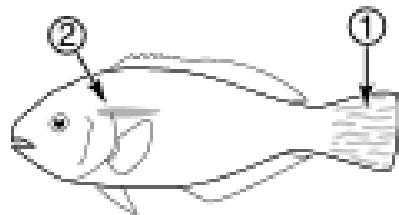

**Distinctive Features:** Greenish overall with fins usually reddish. Small yellow blotch with two or more small black spots on upper forebody. Usually salmon to orange or yellow band from corner of mouth to below eye. Juvenile usually with two white stripes on dark body and white spot behind dorsal fin.

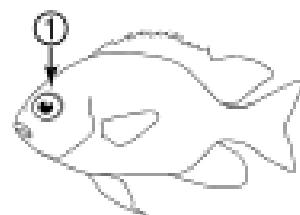

## Striped Parrotfish

**Distinctive Features:** Dark blue or green; tail has pink, yellow or orangish linear markings between border. Gold to yellow spot or stripe above and behind pectoral fin. **JUVENILE:** Three black strips and white belly with no dark markings on tail.

## Purple Reeffish

**Distinctive Features:** Slate blue to dark blue with bright blue markings on head and back. Right blue crescent around upper part of eyes. **JUVENILE:** Brilliant blue with "V" on snout.

## Stoplight Parrotfish

**Distinctive Features:** Emerald green with bright yellow spot at upper corner of gill cover; yellow area at base of tail; and salmon to yellow crescent on tail. **JUVENILE** had reddish brown body with three rows of widely spaced white spots that un the length of the body and white bar on tail.

## Barred Hamlet

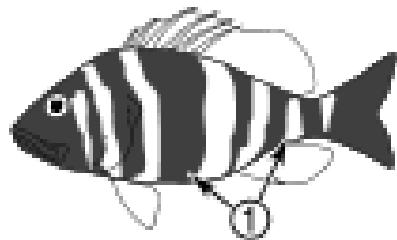

**Distinctive Features:** Brown body bars over pale white to yellowish body. Broad "V" shaped bar on mid body. Bright blue vertical lines on head and around eyes and spots on snout.

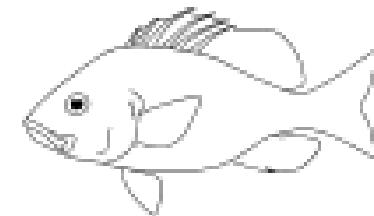

## **Indigo Hamlet**

**Distinctive Features:** Blue and white bars. Blue ventral fins; pectoral fins white or clear.

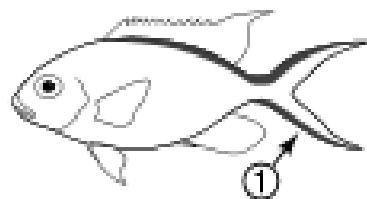

## **Blue Hamlet**

**Distinctive Features:** Bright iridescent blue. Thin, dark borders on tail.

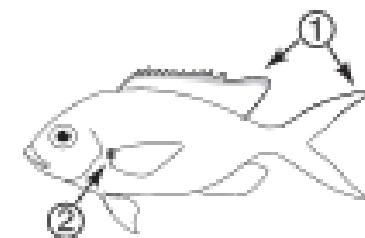

## **Blue Chromis**

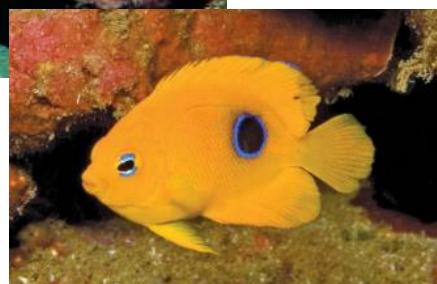

**Distinctive Features:** Brilliant blue; often dark on nape and along back. Slender, deeply forked tail with dark borders.

## **Brown Chromis**

**Distinctive Features:** Brown body. Border of dorsal fin and tips of tail fin yellow; juvenile's tail fin has black borders. Dark spot around base of pectoral fin; juveniles also have white spot at base of dorsal fin.

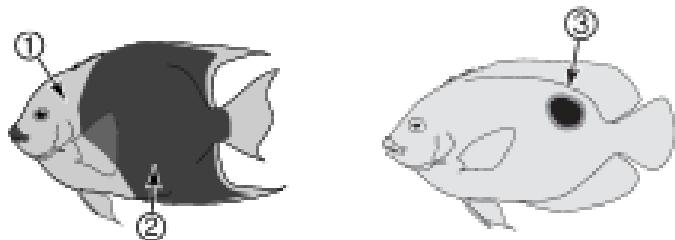

## **Rock Beauty**

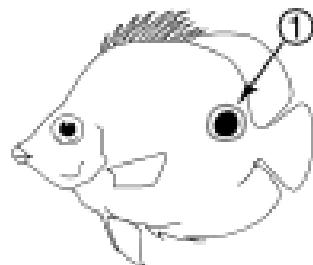

**Distinctive Features:** Yellow to yellow-orange forebody and tail. Mid and rear body black.

**JUVENAL:** Yellow body with a black spot ringed in brilliant blue on rear body.

## **Foureyed Butterflyfish**

**Distinctive Features:** Black spot, ringed in white, on rear body near upper base of tail; juveniles have a second smaller black spot ringed in white on rear dorsal above larger spot. Black bar on head across eye.

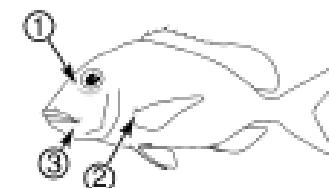

## **Bar Jack**

**Distinctive Features:** Silvery body. Bright blue-and-black border on back runs along dorsal fin and onto lower tail fin.

## **Saucereye Porgy**

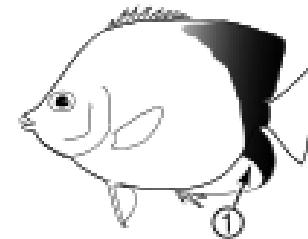

**Distinctive Features:** Silvery with bluish, yellowish and/or brassy cast; often with yellow wash over head and forebody. Short, bluish, saucer-shaped line below eye. Small bluish blotch at upper base of pectoral fin. Corners of mouth yellow.

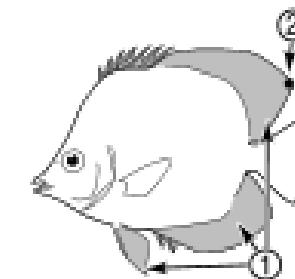

## Reef Butterflyfish

**Distinctive Features:** Yellowish back and dorsal fin; silver-white lower body. Black bar on head runs across eye. Broad black bar-line area on rear body, including rear portions of dorsal and anal fins.

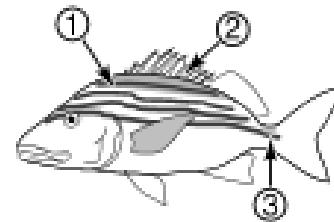

## Spotfin Butterflyfish

**Distinctive Features:** Silver-white body, with black bar on head and runs across eye. Fins (except pectoral) bright yellow; tail fin translucent on juveniles. Black dot on outer edge of rear dorsal fin.

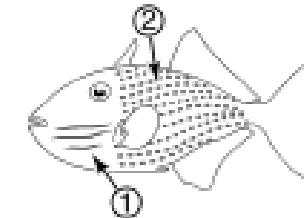

## Spanish Grunt

**Distinctive Features:** Bold black stripes on upper body; black strip running from eye to tail is especially noticeable. Yellow-green dorsal hump. Yellow saddle or spot on base of tail. Yellow pectoral fins; yellow borders on the rear, dorsal and tail fins.

## Sargassum Triggerfish

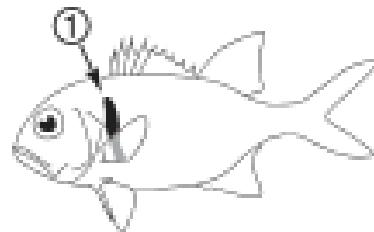

**Distinctive Features:** Body varies from bluish-grey to brownish-grey. Three dark lines on cheek. Series of sashes form thin stripes on body. White dot just forward of eye, with white crescent bordering upper eye.

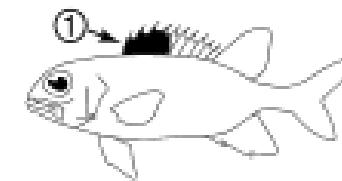

## **Blackbar Soliderfish**

**Distinctive Features:** Red to silvery-red body. Black bar behind head. Red dorsal fin has white marks at tips and a few along base. White borders on leading edge of ventral, anal, rear dorsal and tail fins.

## **Reef Squirrelfish**

**Distinctive Features:** Black blotch on first dorsal fin runs from first spine to third or fourth spine. Reddish body with light silvery body stripes. Tips and base of front dorsal fin marked with white.

## **Spotted Drumfish**

**Distinctive Features:** Front dorsal fin unusually long. Black and white bars on head, and multiple stripes on body. Rear dorsal and tail fins black with white spots. **JUVENILE:** No spots on rear dorsal or tail fins.

## **Jackknife Fish**

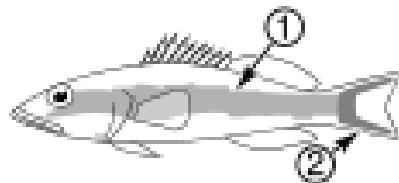

**Distinctive Features:** Fins white with **NO** spots. Single black band runs from top of front dorsal fin to and along midbody to the tip of the tail.

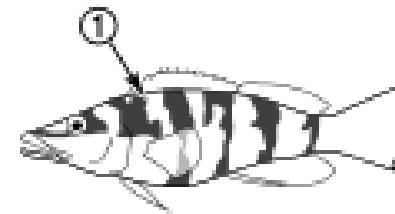

## Tobaccofish

**Distinctive Features:** Midbody is shades of orange to brown (tobacco color). Dark “U” shaped border on tail. Alternating series of dark and white to yellow or salmon blotches along back. White belly.

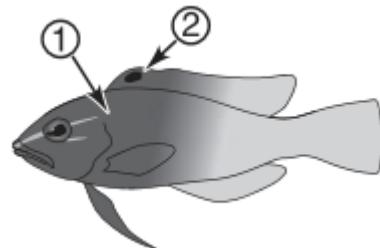

## Harlequin Bass

**Distinctive Features:** Dark tiger-like body bars. Upper body has whiteish undercolor, lower body yellow. Head more pointed than other members of the Seabass family.

## Fairy Basslet

**Distinctive Features:** Bicolored – purple to violet front and yellow to gold rear. Dark spot on dorsal fin. Several streaks on head run across eye.

## Dusky Squirrelfish

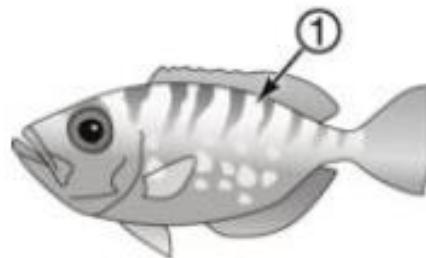

**Distinctive Features:** Usually dusky, bronze-red body. Wide silver stripes alternating with dusky stripes with dark borders. Anal and tail fins bordered in brownish-red to bright red.

## Glasseye Snapper

**Distinctive Features:** Always have silver bars on back, which may be faint. Body varies from red to pale, silvery, mottled pink.

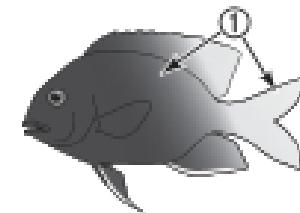

## Bluehead

**Distinctive Features:** Blue head. Two dark bars behind head, separated by white bar. Rear body green to blue-green. Juveniles cannot be distinguished by color pattern or sizes. Black spot behind second dorsal ray extend to base of fin.

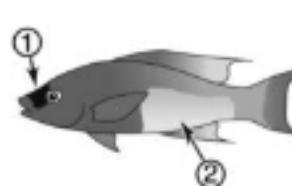

## Yellowtip Damselfish

**Distinctive Features:** Black with bright yellow rear body and tail; size of yellow area varies from upper half of tail fin to covering rear half of body. Pectoral fins translucent with yellow rays. Ventral and anal fins often edged in bright blue.

## Creole Wrasse

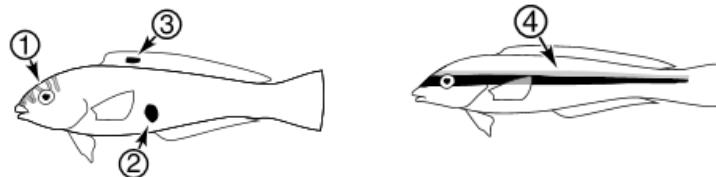

**Distinctive Features:** Dark purple to violet or lavender. Snout usually dark purple. Older individuals develop yellow to reddish areas on lower rear body. Juveniles have a series of spots or short bands along back composed of dark and light dots.

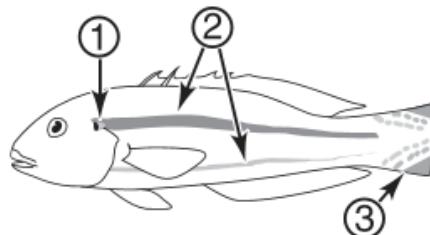

## Clown Wrasse

**Distinctive Features:** Variety of markings and shadings in green blue, violet, rose, orange and yellow. Three red line markings across top of head and two U-shaped lines on Snout. Dark midbody blotch. Elongated black oval on foredorsal fin formed by the merger of two dark spots that develop in the intermediate phase. Juvenile has thin yellow gold strip that runs from snout, above eye to tail, with wider black stripe below.

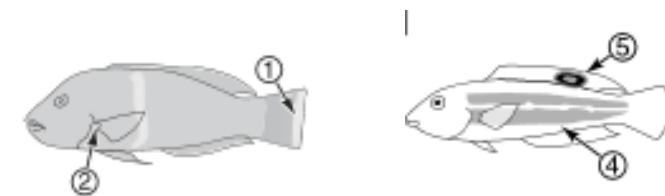

## Slippery Dick

**Distinctive Features:** Small green and yellow bicolored spot above pectoral fins. Darkish to black midbody strip, a second lower stripe is less distinct and absent in juveniles. Dark triangular corners of tail; also absent in juveniles. Juveniles are usually white.

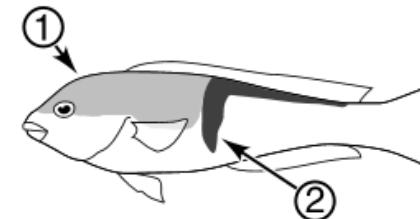

## Puddingwife

**Distinctive Features:** Blue to green body; may have white midbody bar. Yellowish margin on tail. Dark dot at base of pectoral fin. Juveniles have five white bars or dots across upper back. Also have two yellow stripes down middle with bluish-white stripe in between. Dark spot on mid-back and dorsal fin.

## Yellowhead Wrasse

**Distinctive Features:** Yellow head and forebody. Dark midbody bar which continues as a wide border along back to tail. Two wavy lines radiate from rear upper eye. Juveniles are usually have yellow body with brilliant blue midbody stripe.

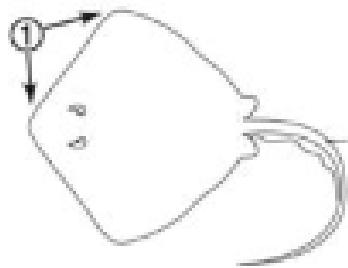

**End of Atlantic Coral Reef Fish**

**End of Atlantic Coral Reef Fish**

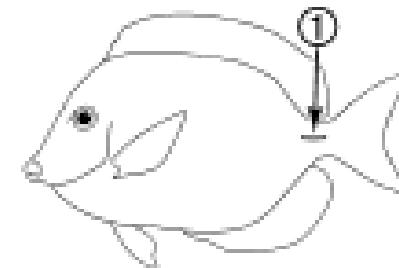

## **Southern Stingray**

**Distinctive Features:** Snout and tips of “wings” pointed. Vary from brown to gray and black. One or two venomous spines at base.

## **Blue Tang**

**Distinctive Features:** Body blue overall; juvenile bright yellow. White or yellow spine on base of tail. More circular than other surgeonfish.

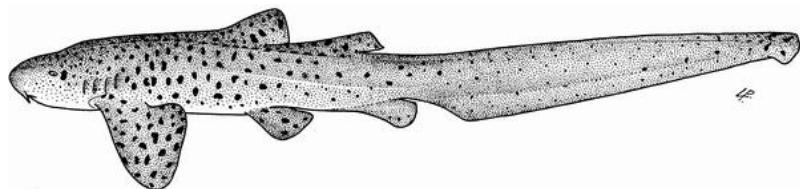

## **Miscellaneous Fish/Animals**

## **Miscellaneous Fish/Animals**

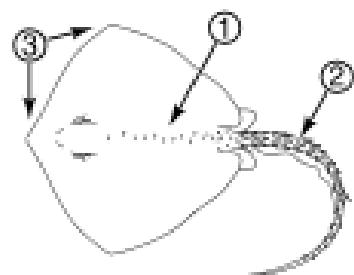

## Zebra Shark

**Distinctive Features:** five longitudinal ridges on a cylindrical body, a low tail fin comprising nearly half the total length, and a pattern of dark spots on a pale background.

## Roughtail Stingray

**Distinctive Features:** Irregular row of spines and bumps down midback and onto tail. Numerous rows of spines on tail. Snout and tips of “wings” pointed.

## Bullnose Eagle Ray

**Distinctive Features:**

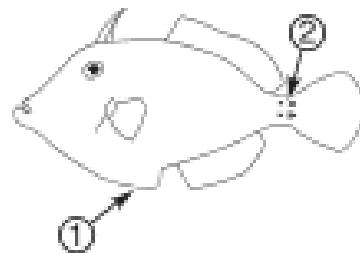

## Pelagic Stingray

**Distinctive Features:** wedge-like shape of its pectoral fin disc, which is much wider than long, as well as by the whip-like tail with extremely long tail spine, and uniform violet to blue-green coloration.

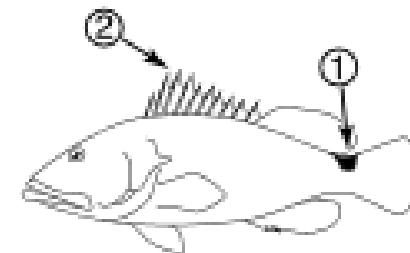

## **Whitespotted Filefish**

**Distinctive features:** Noticeably extended body appendage. Orange spines at base of tail. Two phases: one with large whiteish spots, the other without. Upper body shags of gray to olive or brown. Snout whitish.

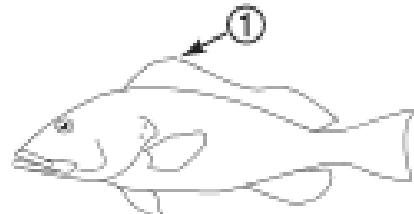

## **Nassau Grouper**

**Distinctive features:** Black saddle spot on base of tail. Doral fin notched between forward spines. Five irregular, olive-brown body bars over light background. Diagonal bar from snout across eye to star of dorsal fin.

## **Red Grouper**

**Distinctive features.** Body color is variable earthtones, usually reddish brown with small scattered whitish blotches. Foredorsal fin has smooth straight edge (not notched). No saddle spot at base of tail.

## **Red Hind**

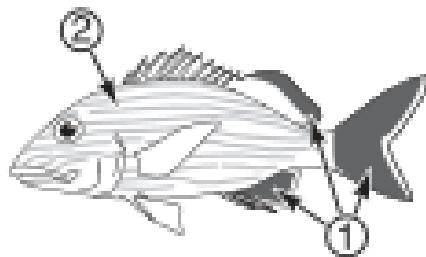

**Distinctive features.** Reddish spots over a whitish body (no spots on dorsal fin or tail). Tail and rear fins have black margin edged in white.

## Caser Grunt

**Distinctive features.** Yellow to dark copper/bronze stripes over white to silver-blue body. Dusky real dorsal, anal and tail fins; tail has pale margin. Eyes often blue.

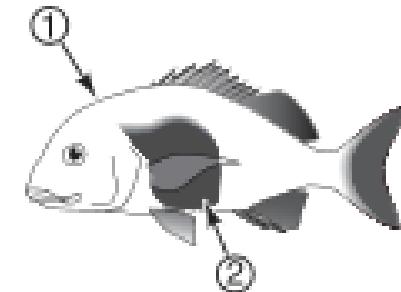

## Cottonwick

**Distinctive Features:** Narrow yellow horizontal stripes over a white to silver body. Bold, black strip on dorsal fin continues to form a “V” on tail. Black strip begins on snout, runs across eye and continues to tail; color may change to yellow behind eye.

## Black Margate

**Distinctive features.** High back profile. Dark Patch behind pectoral fin. Silvery-grey body; scales on back have dark centers. Fins dusky.

## White Grunt

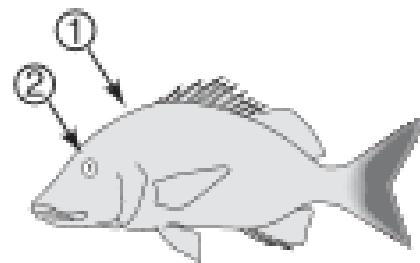

**Distinctive Features:** Stripes only on head. Head stripes are yellow and bluish silver. Large scales on body form checkered pattern of yellow and bluish silver.

## **White Margate**

**Distinctive Features:** Normally pearl grey and unmarked, but may have dusk spots over the body. High back profile. Light pectoral fins. Dorsal and tail fins are usually dusky. Largest of the grunts.

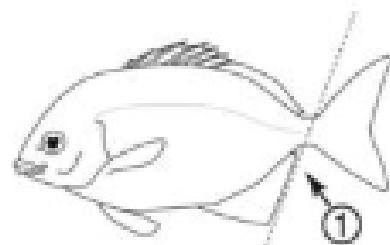

## **Blue Runner**

**Distinctive Features:** Tips of tail fins dark. Somewhat elongated black spot near upper end of gill cover, may have faint bluish bars on body.

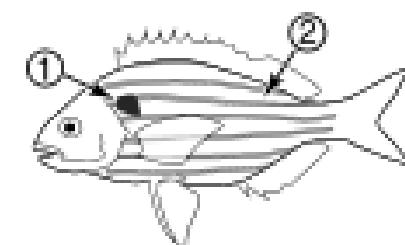

## **Chub (Bermuda/Gray)**

**Distinctive Features:** Rear edge of medium-width triangular anal fin does not align with front edge of upper tail lobe. Gray to silver “football shaped” body.

## **Pinfish**

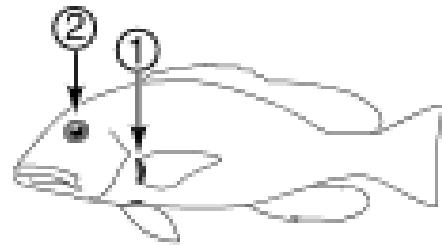

**Distinctive Features:** Bluish to green silver, somewhat elongated body. Large dusky spot behind gill cover centered on lateral line. Narrow bronze and blue stripes on body.

## **Blackfin Snapper**

**Distinctive Features:** Red body. Dark blotch at base of pectoral fin. Iris orange or bronze.

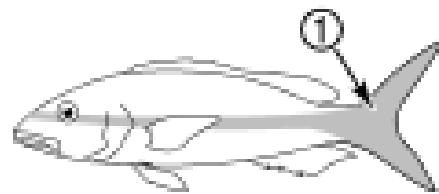

## **Gray Snapper**

**Distinctive Features:** Often no distinguishing features. Darkish band occasionally runs from lip across eye and onto lower nape.

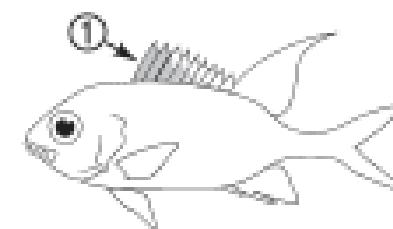

## **Yellowtail Snapper**

**Distinctive Features:** Brilliant yellow midbody stripe and tail. May have yellow spots on upper body. Tail deeply forked.

## **Squirrelfish**

**Distinctive Features:** Yellowish front dorsal fin. Reddish body with light silvery stripes and occasional white patches on body. Elongated rear dorsal fin. Largest of squirrelfish.

## Atlantic Green Sea Turtle

**Distinctive Features:** Shell plates lay side by side (not overlapping). They only have two plates between the eyes. The first four costal plates do not touch the nuchal which helps to distinguish them from Loggerheads and Ridleys.
